

# Preparing for the cold weather

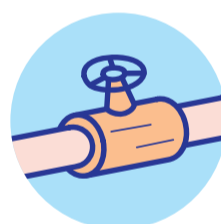

**1** Ensure that any exposed pipework and taps are wrapped in a quality lagging.

**2** Repair any dripping taps and faulty ball valves.

**3** Stop any draughts and keep your building warm. Don't forget outbuildings and other site buildings. Consider turning off this supply if not required.

**4** Locate your main stop tap and ensure it's in good working order.

**5** Service your boiler or central heating.

**6** Keep the name and number of an approved water safe plumber handy in case of an emergency.
